▪ **COURSES TAUGHT (n=10, *new courses)**

GLG 111: The Dynamic Earth (Fall 2016, 2018-2023; 3-credit hours)

Introductory-level course taught to majors and non-majors. This course provides an introduction to physical geology. Key topics that are addressed include the formation of Earth, Earth's internal structure, plate tectonic settings, the generation of rocks and their minerals, natural hazards, geological time, landscape evolution, and climate change.

***GLG 347: Professional Development & Geoscience Career Readiness** (Fall 2024; 1-credit hour)

This course supports undergraduate students as they navigate their degree programs and prepare for a career in the geosciences post-graduation. This course focuses on discipline-specific student professional development and career readiness. This includes a visit to the Miami University Center for Career Exploration and Success; CV and resume design as informed by alumni in the geoscience profession; finding and applying for internships, interview preparation and; analysis and review of national geoscience workforce trends.

GLG 357: Igneous and Metamorphic Petrology (Spring 2016-2023; 4-credit hours)

This is an integrated classroom, laboratory, and field-based course which introduces students to the petrogenesis of Igneous and Metamorphic rocks from different tectonic settings on Earth. This course integrates scientific communication and writing skills and is purposefully designed so that students develop their analytical, critical thinking, research and writing skills. This course involves a 4-day field trip to SE Missouri and a 6-week Course-based Undergraduate Research Experience both of which I developed.

GLG 411/511: Field Camp (Summer 2017- 2019, 2021-2022; 2017-2019 first 3 weeks only, 6-credit hours)

The Miami University Field Geology course is run by the course Director Dr. Brian Currie for 5 weeks during the summer throughout June and July with field locations in Idaho, Wyoming, and Montana, and has a base at the Miami University Geology Field Station in Dubois, WY. The aim of this field course is to engage the students in authentic field-based experiences. Throughout this course, students are required to integrate content knowledge with their own observation-based evidence and interpretations, and to communicate that knowledge through writing and the production of geologically accurate field maps.

GLG 427/527: Isotope Geochemistry (Fall 2015, 2018-2020, 2022, 2024, Spring 2017; 3-credit hours)

This upper-level undergraduate and graduate-level course focuses on the chemical composition and evolution of Earth and extraterrestrial objects. Students are expected to be able to comprehensively discuss the application of high-temperature isotope geochemistry in the field of Earth and Planetary Sciences. The course requires students to develop scientific literacy through abstract writing, scientific paper writing, oral presentations, and grant writing skills through numerous structured exercises and assignments.

***GLG 457/557: Planetary Geology** (Fall 2023; 3-credit hours)

Fall 2023 was the first offering of this course. This course discussed how fundamental geological principles can be applied to understanding the evolution of other planets, moons, asteroids, and comets. Past, present, and future exploration of space (including space tourism) was explored alongside the ethics of space travel and future plans for permanent human bases on the Moon and Mars (and beyond). GSC 601: College Teaching Enhancement Program (Fall 2023, 2024; 1-credit hour, 2 sections taught)

This course is available to all graduate students at Miami University and can be taken as part of the College Teaching Certificate, or as a stand-alone course. Each section of the course meets 6 times for 1 hour throughout the semester. This course orients graduate students to practical issues related to college teaching, scholarship and service, and how these faculty roles are affected by institutional context. For Fall 2023, this included academic institutional types and expectations; classroom assessment techniques; writing teaching philosophy statements; course, syllabus, and backwards design; and learner-centered classrooms.

GSC 602: College Teaching (Fall 2023, 2024; 1-credit hour, 1 section taught)

This course is available to all graduate students at Miami University and can be taken as part of the College Teaching Certificate (GSC 601 as a pre-requisite or co-requisite). Course met 6 times for 2 hours throughout the semester. The course orients graduate students to the theory and research associated with college pedagogy, and a variety of evidence-based teaching approaches. This included best teaching practices; inclusive course design and syllabi; designing learning outcomes and assessments; ethics in higher education; and academic integrity.

***GLG 647: Graduate Student Onboarding** (Fall 2021-2023, Spring 2023 1-credit hour)

Fall 2021 was the first offering of this course. All new graduate students in the MA, MS, and PhD programs enroll. This course focuses on the informal “hidden curriculum” of graduate school that works to complement formal student learning such that all individuals feel supported and have the necessary skill set with which to lead successful graduate careers. The course was offered once every two weeks with a synchronous option via Zoom offered each time. A total of 7 sessions were held and started during Week 1 of the semester. Topics in this first offering were informed by feedback from our own graduate student cohort in the Spring of 2020, in addition to feedback from departmental faculty, materials available online for a graduate geoscience onboarding course, and discussions during a National Association of Geoscience Teachers webinar. The second offering in Fall 2022 was revised based on feedback and included revisions to all offered sessions including a new session on Science Communication. Community-building activities were integrated into weeks in between sessions and included visits to Miami’s Center for Teaching Excellence and the formal gardens (among others). The third offering in Fall 2023 was revised based on feedback from the Fall 2022 student cohort with more time during class sessions reserved for open discussion and reflection, and two visits to the Miami University Makerspace. The Spring 2024 course was offered as a graduate-level writing course following completion of the Howe Writing Center Certificate Program - Supporting Graduate Learning through Writing, in Fall 2023. The course was also designed based on feedback from current graduate students and GLG graduate program alumni.

***GLG 657: Geology of our Solar System** (Fall 2021, 3-credit hours)

Fall 2021 was the first offering of this graduate-level course. This course discussed the geological history of the rocky objects in our Solar System through analysis and evaluation of data and relevant peer-reviewed literature. This included differentiated planets, moons, asteroids, and meteorites (including chondritic and achondritic materials). The geologic processes that have shaped these objects over billions of years (e.g., volcanism, impacts, tectonics, sedimentology) were discussed alongside the observations that are used to interpret their histories (e.g., remote sensing and sample-based science). Discussion of past, present, and upcoming missions was integrated throughout the course, in addition to discussion of space policy and ethics.
